

## **Guide letter 2: Improve pest species management**

Include the following points in your letter:

- I would like the management of Kosciuszko National Park to:
- work towards the removal of all feral pest animals from the entire Park, including feral horses, using the most effective and humane methods available, including Australian Veterinary Association endorsed aerial shooting.
- without a cull, feral horse numbers will again double in five years and I do not want Kosciuszko becoming a horse ranch.
- stop the stocking of feral fish species into the Park's rivers, as recommended by the Independent Scientific Committee.

Please advise what steps your Government is taking toward better wildlife management for Kosciuszko National Park?

Signed
